C; Comment: The LMW kininogen precursor is produced from the same gene as the HMW form at C; Comment: Kininogen is a cysteine proteinase inhibitor, takes part in initiation of the C; Comment: Bradykinin, released from kininogen by kallikrein, is a potent vasodilator, xyproline residue is present in the kininogen prior to the release of bradykinin.
C; Superfamily: kininogen; cystatin homology
C; Keywords: alternative splicing; blood coagulation; cysteine proteinase inhibitor; glyc
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         kininogen, LMW I precursor - bovine
N;Alternate names: alpha-2-thiol proteinase inhibitor; preprokininogen
N;Contains: bradykinin (kallidin); kininogen I; kininogen II; prokininogen
C;Species: Bos prinigenius taurus (cattle)
C;Date: 14-Nov-1983 #sequence_revision 14-Nov-1983 #text_change 09-Jul-2004
C;Accession: A01283

kininogen, HMW I precursor - bovine
N;Alternate names: alpha-2-thiol proteinase inhibitor; preprokininogen
N;Contains: bradykinin (kallidin); kininogen I; kininogen II; prokininogen
C;Species: Bos primigenius taurus (cattle)
C;Bate: 14-Nov-1983 #sequence revision 14-Nov-1983 #text_change 09-Jul-2004
C;Accession: A01281; A91923; A91938; A29559
R;Kitamura, N.; Takagaki, Y.; Furuto, S.; Tanaka, T.; Nawa, H.; Nakanishi, S.
Nature 305, 545-549, 1983
A;Title: A single gene for bovine high molecular weight and low molecular weight kinino, A;Reference number: A93317; MUID:84014106; PMID:6571699
A;Accession: A01281
A;Accession: A01281
A;Cross-references: UNIPROT:P01044; UNIPARC:UPI000012DFIC; GB:V01491; GB:K01757; NID:949
A;Accession: A9323, 1970
U. Biochem. 67, 313-323, 1970
U. Biochem. 67, 313-323, 1970
A;Title: Studies on the structure of bovine kininogen: cleavages of disulfide bonds and A;Reference number: A91923

CC IP PROCTION: (1) Kininogens are inhibitors of thiol proteases; (2)
CC IP PROCTION: (1) Kininogens are inhibitors of thiol proteases; (2)
CC HAWN-kininogen plays an important role in blood coasgulation by helping to position optimally prekallikrein and factor XI next to factor XII; (3) HMW-kininogen inhibits the thrombin-and plasmin-cc factor XII; (3) HMW-kininogen inhibits the thrombin-and plasmin-cc induced aggregation of thrombocytes; (4) the active peptide bradykinin that is released from HMW-kininogen shows a variety of contraction, (4B) induction of hypotension, (4C) natriuresis and diuresis, (4D) decrease in blood glucose level, (4E) it is a cc mediator of inflammation and causes (EE) increase in vascular permeability, (4E2) stimulation of nociceptors (4E3) release of cother mediators of inflammation (e.g. prostagalandins), (4F) it has a cardioprotective effect (directly via bradykinin action, indirectly via endothelium-derived relaxing factor action); (5) LMW-kininogen is in contrast to HMW-kininogen not involved in blood contraction is in contrast to HMW-kininogen not involved in blood
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Kato H., Nagasawa S., Suzuki T.;

(2) They play a role in blood coagulation by helping to position optimally prekallikrein and factor XI next to factor XII. (3) They are inhibitor of thiol
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                of the T-II.
